Community Grants

## Example only

This is an example to provide guidance on the length and level of detail required for a successful grant application.

## Entry form

**Organisation Name:**

**ABN:**

**Is your organisation not-for-profit:**  Yes  No  Not sure

If not sure, please tell us a little about your organisation including whether or not you have deductible gift recipient status

### Organisation description:

e.g. years in operation, the people or community it supports, outline of major objectives, areas of health focus, etc.

Community Help is a not-for-profit organisation established in 2015.

Our aim is to help the local community of Chatswood by supporting projects proposed by residents that align with our own objectives. We are focused on young people to nurture community responsibility that assist with personal development. We currently have 500 active members who are part of Community Help and our projects have helped approximately 20% of the population of Chatswood over the past seven years.

Our mission is to make Chatswood the best place to live for people of all backgrounds and walks of life. We aim to achieve our mission based on four key principles of diversity, inclusion, community, and support.

One of our objectives in 2022 and 2023 is to increase awareness of preventable illness in consultation with healthcare professionals, especially in at-risk groups.

For further information please visit our website: [insert website].

### Project description:

A description of the project that needs funds via a *With Vaccines Community Grant*, objectives of the project, what will be delivered, details of the target audience / population that will benefit, the location, give a short description of the positive impact this project will have on the local community; estimate when the project will launch and duration; what you hope to achieve, etc.

A poster campaign has been proposed by our members with the core objective of encouraging people in Chatswood to talk to their healthcare professional about vaccine-preventable illness, such as influenza, whooping cough and meningitis.

These posters will be offered to local businesses, shopping centres, GP surgeries, schools, churches, and community halls. Around 1,000 posters will be printed to meet the specifications of those interested in supporting the project (e.g A2 posters or larger). A QR code will be included on the posters for people seeking further information online.

The target audiences for this project are all residents of Chatswood, with the poster designs featuring people of different ages and backgrounds. For example, photos of parents for childhood vaccinations, photos of young adults for meningococcal disease, photos of grey nomads for travel vaccines, and photos of older people for influenza.

The project has already received some funding, but an additional \$5,000 from the With Vaccines Community Grants program will allow us to increase the print-run of posters and allow greater tailoring of poster sizes.

The project will be delivered by our dedicated team of volunteers over the coming 6 months, with all posters expected in-field by November 2022.

The posters are expected to remain in place until around April 2023.

We hope the project will have a positive impact on the local community by increasing the number of people talking to their healthcare professional about vaccine-preventable disease.

### Alignment to *With Vaccines Community Grants*

The goal of this grants initiative is to improve vaccination coverage of all vaccines amongst underserved populations in Australia. Describe how your project aligns with this goal and how it will help improve vaccination rates amongst underserved populations in Australia.

This project aligns with the With Vaccines Community Grants because the posters we create will encourage people to talk to their healthcare professional about vaccine-preventable diseases. The posters will focus on populations that are particularly vulnerable to certain viruses and bacteria, so they are reminded that prevention is possible in consultation with a doctor.

## Funding gap for project:

Explain the total cost of the project and how the *With Vaccines Community Grant* would contribute

The total cost of the project is \$15,000. This includes the photography, design, and printing of 1,000 posters for the Chatswood local community. \$10,000 in funding has already been secured from the local council and donations. However, we have a funding gap of \$5,000 that could be met if we are successful in this application for a *With Vaccines Community Grant*.

## Project budget:

A breakdown of the total project budget

Photography for posters = \$2,000  
Design of 5 x posters = \$5,000  
QR code integration and updated website = \$5,000  
Poster printing and re-sizing = \$3,000

## Applicant contact details:

Name:

Role within organisation:
